Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant's repr. discussed differences between prior art determination of angle and distance data and applicant's invention. Specifically, the instant invention performs a time domain normalization of the signature data prior to the extraction of the angle and distance data. Examiners agreed that Plamondon does not appear to perform any such normalization. Applicant's repr. proposed amending claim 1 to include such normalization. Specifically, the "extraction means" would be amended to be a "first extraction means" to obtain a signature, a normalization means would be inserted along with a second extraction means that extracts angle and distance data from the normalized data. Applicant's repr. also indicated that the claim language would be modified to clarify that the reference data was also normalized. Finally, applicant's repr. indicated that additional claims to the corresponding method might also be added. Examiners indicated that such claim language would appear to overcome the outstanding rejection based upon Plamondon..
